

Conventional voltmeters are very good at showing how many volts there are in your electrical system. While this is a good enough indication of your electrical systems operation, a voltmeter is all but useless when you need to know just how much energy is left in your battery.

A Battery Condition Indicator eliminates all the guesswork. The expanded scale accurately displays the battery's usable energy, telling you when to recharge.. even when it's time to replace your battery.

A must where one or more batteries are used. The Faria Battery Condition Indicator is an accurate and inexpensive solution for knowing exactly how much power remains in your battery.

Benefits

- Available for Voltage ranges from 12, 48 and 72 volts
- Know how much energy is left in your battery
- Works equally well on all 12 volt deep cycle and starting batteries, including sealed types
- Back lit for night viewing or use in bad weather
- Available in all Faria Standard styles
- Mounts in a standard 2 1/16 inch hole

Features

Meets or exceeds the specifications MIL-STD-202 for shock and J1455 for vibration and voltage tolerance.
